the italian window

NATURA Slim-H

PELLEGRINI NATURA Slim-H

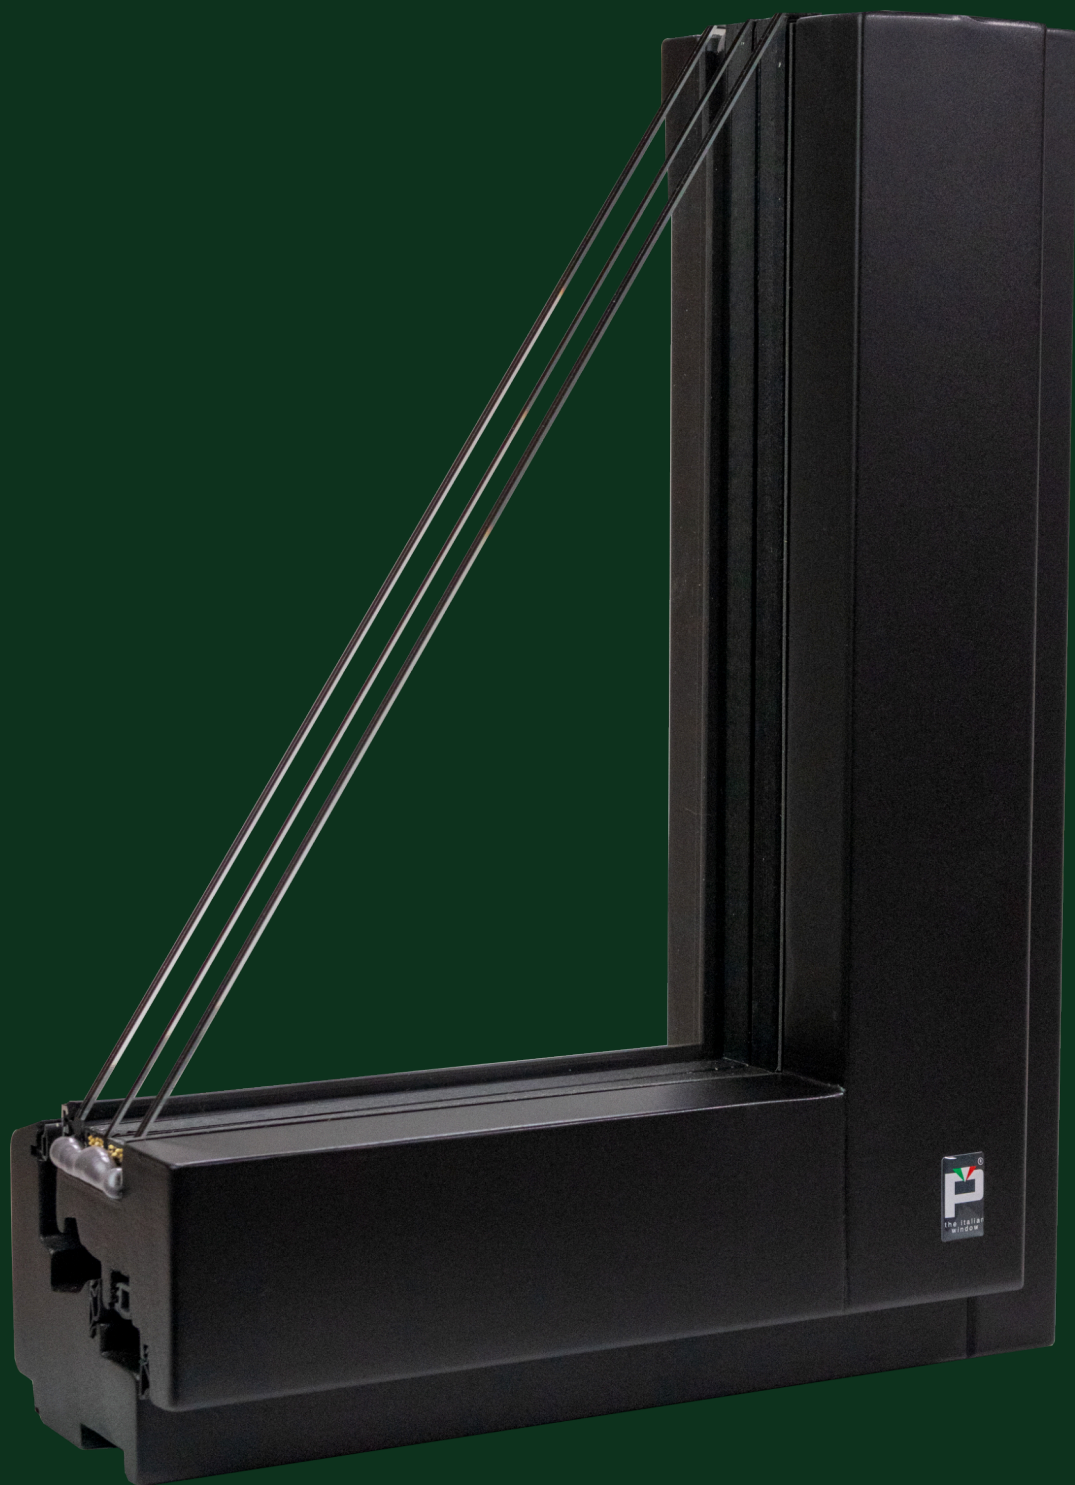

THE WINDOW WITH AN EXCLUSIVE DESIGN. WOOD IN ITS MOST ESSENTIAL FORM.

Pellegrini the italian window, with this new model, has designed a window that goes beyond the simple window frame, characterizing itself as a design element, in perfect Pellegrini's style, authentic. The minimal profile reduces the visibility of the sashes from the outside, and leaves room for light, fitting perfectly into contemporary style constructions.

Our vision of the window frame as a design element is developing and consolidating more and more; this model wants to be a tribute to the contemporary, going hand in hand with the evolution of modern architecture that leads the window to become almost only glass, aligning itself with the motto now widespread in the world of design of "less is more".

The realization of this new minimal model has been possible thanks to our continuous research and technological evolution in 4.0 optics, and to the design that has been able to combine all the needs with a selection of materials of the highest quality. Pellegrini the italian window has been able to reach with this model reference thermal performance, in terms of energy saving, and acoustics for greater living comfort.
